

ISO 45001 to replace OHSAS 18001

The occupational health and safety (OH&S) management system, ISO 45001, is a new international standard that provides a framework for an organization to manage risks and opportunities to help prevent work-related injury and ill health to workers. The intended outcome is to improve and provide a safe and healthy workplace.

ISO 45001:2018 is intended to help organizations, regardless of size, complexity or sector, in developing systems to proactively prevent injury and ill health. The requirements link seamlessly with other management systems e.g. ISO9001/14001 and can be easily integrated with management and business processes.

If you require ISO 45001:2018 certification but don't have the resource to obtain or maintain certification then ARGoMAS Ltd is here to help.

Key Benefits of ISO 45001:2018

Employees feel their needs and safety are being taken into account

A strong occupational health and safety management system can help reduce injuries and illness in the workplace

May help avoid legal costs and may even reduce insurance costs

Create a positive corporate culture supportive of prevention of workplace injury and illness, as well as employee participation

ISO 45001 enables an organization to identify OH&S hazards, risks and opportunities to proactively manage to support worker wellness/well-being. In comparison to the old OHSAS 18001 standard, the ISO 45001 standard calls for the organization's management and leadership to:

- Integrate responsibility for health and safety issues as part of the organization's overall plan
- Demonstrate engagement with employees (and where they exist employees' representatives) to create an organizational cultural that encourages active participation of workers in the OH&S management system
- Ensure the OH&SMS is integrated into an organizations business processes
